

Match Masters: Increasing IAP Revenue

In this pitch deck, we will explore strategies to increase the in-app-purchase (IAP) revenue of Match Masters by at least 15%. Let's dive in!

by **Rahul Ohri**

Description

- Match Masters is a popular puzzle game, available on multiple platforms.
- The game is centered around matching colorful shapes on a grid to progress through levels.
- Players can compete against each other or team up with friends to complete challenges.
- With bright graphics and an intuitive user interface, Match Masters has become a fan favorite.

The Core Loop

- The player selects a game mode and enters matchmaking to be paired with an opponent.
- The game board is generated, and both players take turns making matches of three or more tiles of the same color to score points.
- The first player to reach the target score or the player with the highest score when the timer runs out wins the game.
- The winner receives a reward in the form of in-game currency, and both players have the option to rematch or exit to the main menu.
- The player can use the earned in-game currency to purchase various power-ups, which can help them win future matches or progress more quickly through the game.
- The player can also participate in daily challenges or complete quests to earn additional rewards and progress through the game's levels.
- The player repeats the core loop by entering matchmaking, playing matches, and earning rewards and progress through the game.

This core loop is designed to keep players engaged by providing them with a challenging and competitive gameplay experience, with the potential to earn rewards that can help them progress faster or enhance their abilities within the game.

Current IAP Options

Boosters

These are essential to win games, the more boosters you can activate the more a player can win

Stickers

Completing a sticker book gives a sure shot booster pack of 6, that too diamond level. It also provides different aesthetic looks

Chat Animations

During the game, one might want to brag or express themselves, these different cool animations allow the users to do so

Problems with current IAPs

Value For Money

Even after buying boosters players **still end up losing** which makes them think they wasted money

Match Making Algorithm

Players are matched with players **significantly higher trophies or better boosters**, which makes them lose more often they would want to

Booster Retention

When internet connection issues or App Not Responding issue occurs , players **lose their boosters** (some of which they have bought as well)

Proposed Features

1

New IAP - Shields

We will introduce new IAP option - Shield, whenever a user applies a shield, the booster will not be lost even if the user loses. 1 Shield can be used only once and will be retained if a user wins the match

2

Match Making Changes

For users that buy boosters, the game should match them with players that have similar or lesser booster level applied. This will reduce the sense of unfairness amongst the paying users and will lead to higher number of purchases

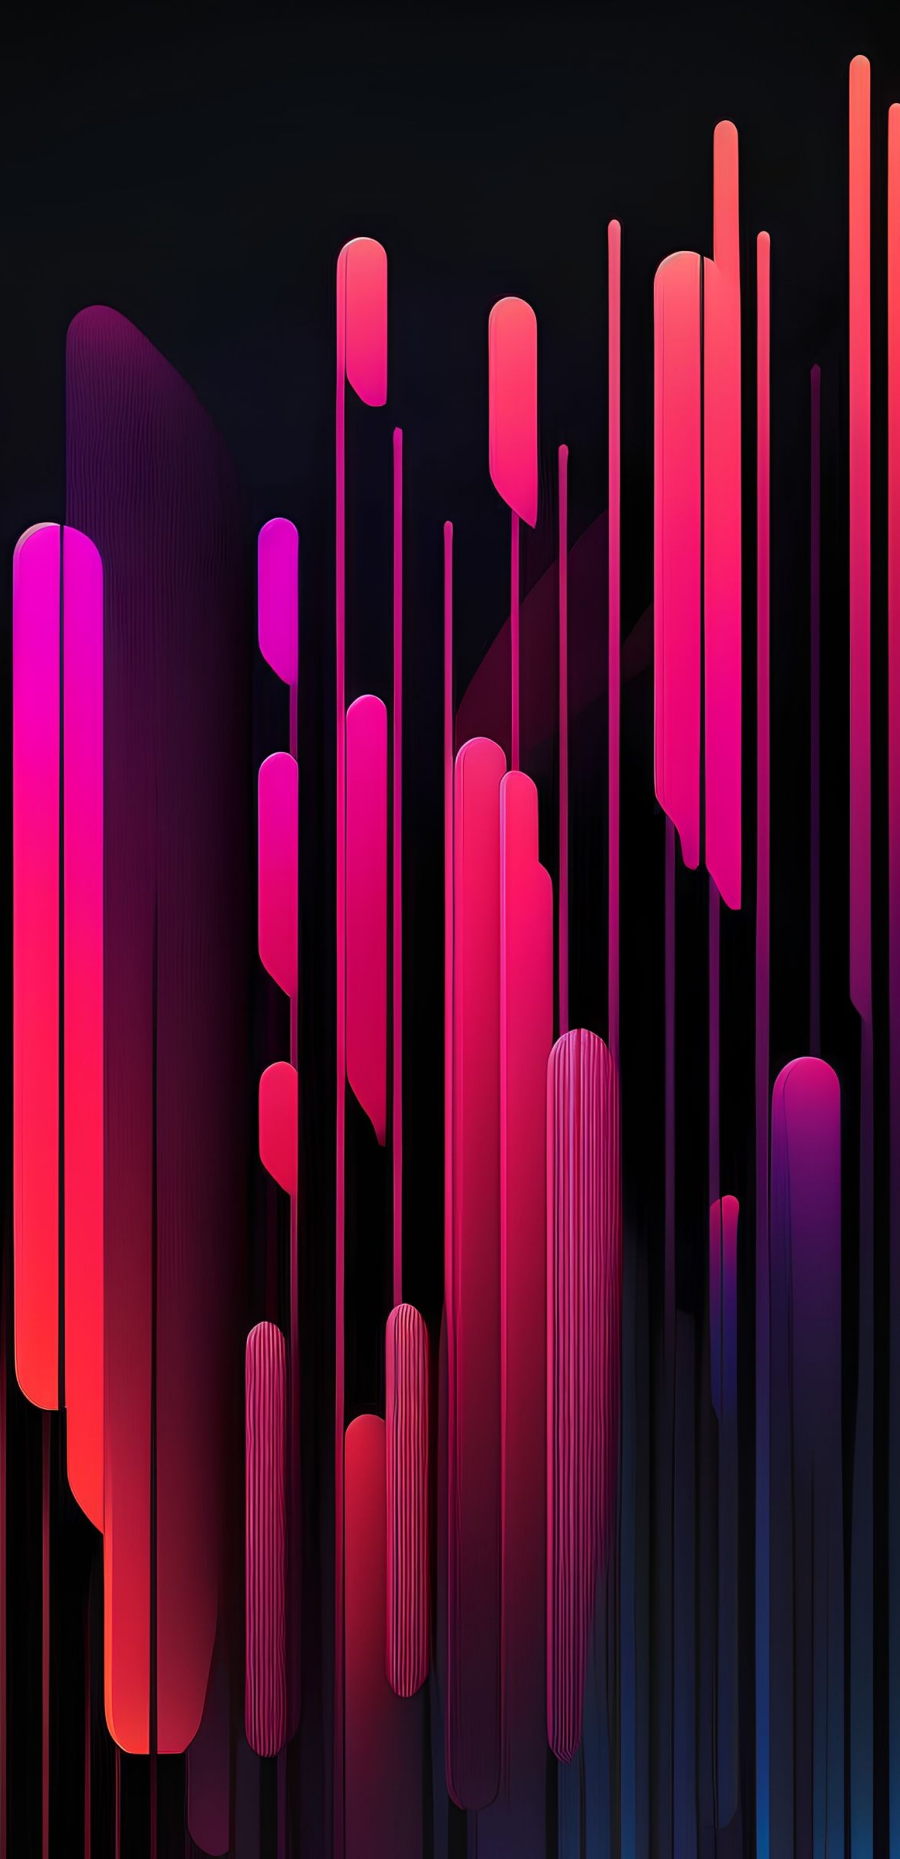

3

Daily/Weekly/Monthly League

Players will be ranked based on the trophies earned. There can be daily/weekly/monthly leagues. Where a top x% win boosters and stickers or daily spins

Summary

For the purpose of this assignment, I will focus on the 1st and 2nd proposed changes as they target the user pain points - Value for Money, Match Making Algorithm, Booster Retention

Proposed Feature 1 - Shields IAP

1 Multiple IAP Packs

- This will be a consumable pack with a variety of combos - single , triple and a pack of 5 shield combos

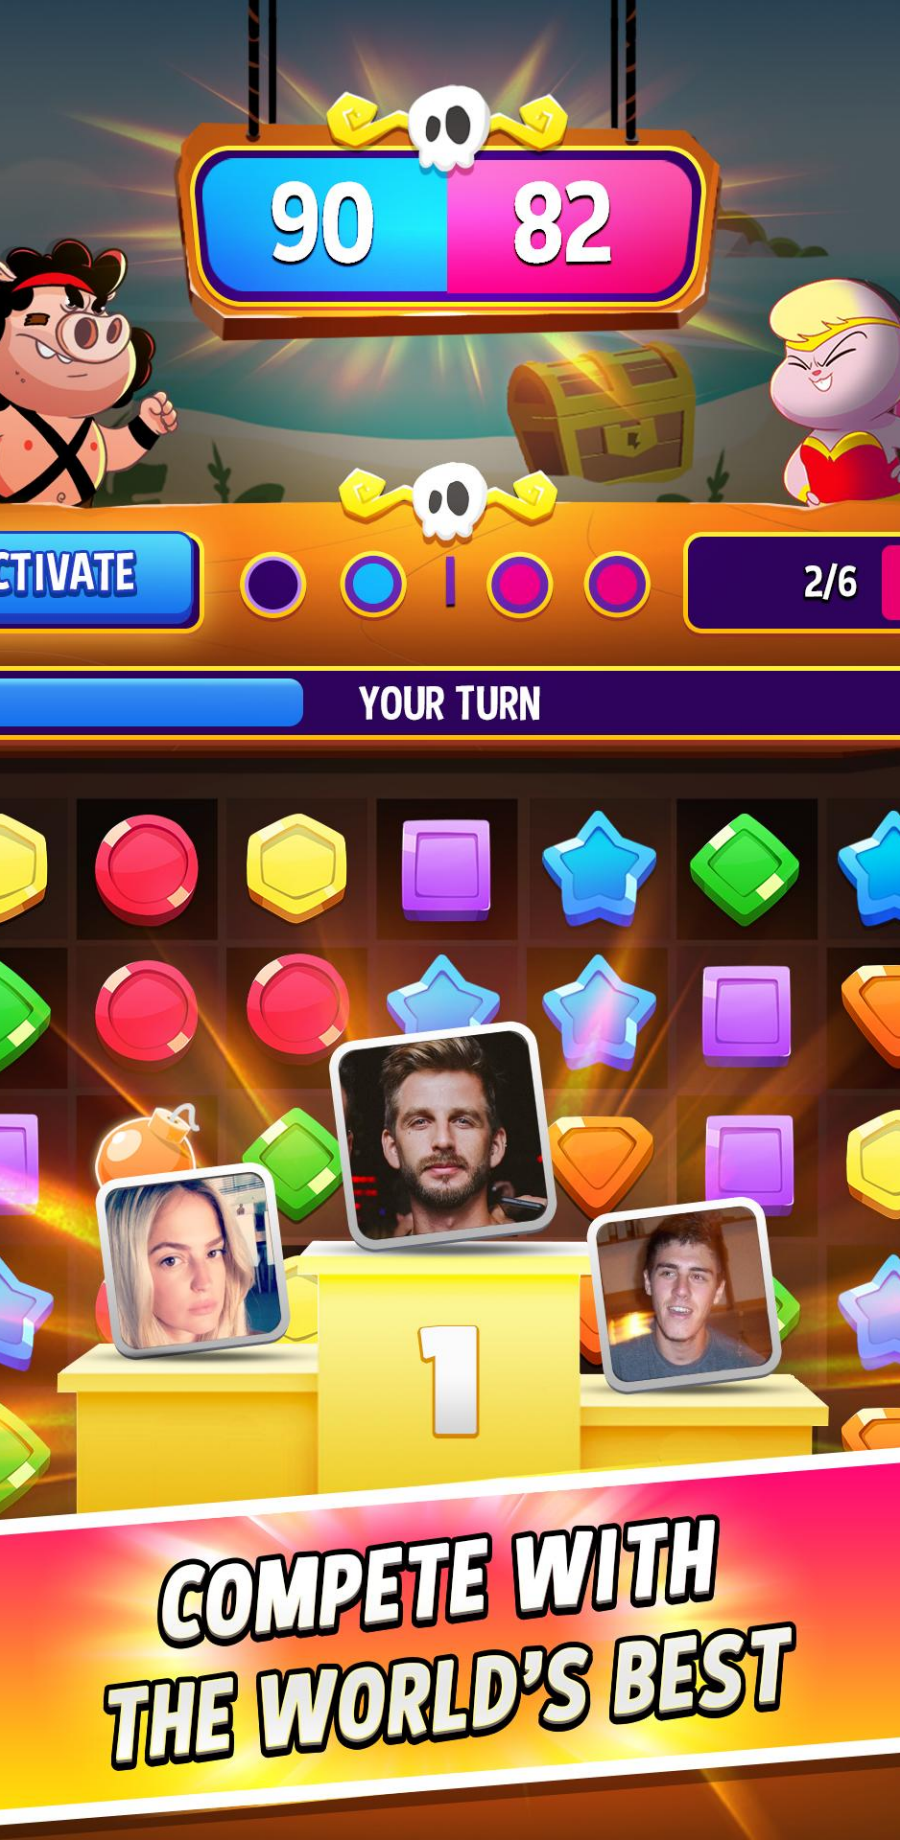

2 How it works?

- A user will buy any one of the IAPs .
- Shield will be auto-applied if the count is greater than 0
 - If a user loses the match , they will not lose the booster but will lose the shield
 - If a user wins the match, both booster and shield will be retained
- A shield icon will be shown during the gameplay if its auto-applied

3 Why this feature?

It solves for the major pain points of users

- Retention of Boosters
- Value for Money

Proposed Feature 2 - Match Making Changes

1 Algorithm Changes

- First, we will have to segment the users based on the parameter - number of users that have bought boosters
- Second, we will segment users based on the booster they choose to apply before they start a game

2 How it works?

- The algorithm will first check for the segment of users that have bought boosters
- The algorithm will then check for the level of the booster chosen by the users
- It will now match the user with a user who has selected the same or lower level of the booster

3 Why this feature?

It solves for the major pain points of users

- Value for Money
- Game play fairness

By understanding our target audience, analyzing the current system, and introducing new strategies, we believe that we can increase the Match Masters' IAP revenue by at least 15%. With a careful implementation plan and a strong marketing strategy, we can ensure the continued growth and success of the game.
